LAAI | AI FOR CONSTRUCTION

You don't need 20 AI tools. You need a strategy.

Why collecting AI subscriptions rarely saves time, what a simple AI strategy looks like for a construction company, and a complete example you can copy.

INSIDE

The 5 building blocks, 6 steps, a full example strategy and a one-page template

WRITTEN BY

CHECKED

October 2026 · Málaga

HOW IT USUALLY STARTS

Every week a new AI tool. A year later, nothing has changed.

Someone sees a demo, buys a subscription and tries it on a Friday afternoon. Multiply that by a whole office and you get the picture below: many tools, little use, no measured savings.

A 25-PERSON OFFICE, BEFORE A STRATEGY FICTIONAL EXAMPLE

TOOL	PEOPLE	PER MONTH	USED WEEKLY?
Personal chat AI accounts	9	€180	Some
A second chat assistant	4	€80	Rarely
Rendering app A	3	€90	Rarely
Rendering app B	2	€70	No
Image upscaler	2	€24	No
Meeting note-taker	5	€75	Some
“Chat with your PDF” tool	3	€45	Rarely
Presentation generator	2	€40	No
Writing assistant	3	€36	Rarely
Transcription app	1	€15	Yes
AI takeoff trial	1	€250	No
Feasibility tool	1	€180	Rarely
Code helper	1	€10	Yes
Free tools nobody tracks	?	0	?
Total		**€1,095**	

€13,140
a year in subscriptions, spread over 13 paid tools

14 places
where client drawings and data may now be stored

0 h
of saved time anyone has measured

STRATEGY FIRST, TOOLS LAST

An AI strategy fits on one page

It is not a 60-page report. It is a short, shared agreement on what you want AI to change, where you start, which few tools you use, the rules, who owns it, and how you will know it works.

01
Goals
Two or three business results you want, in hours, money or quality.

02
Use cases
The few tasks where AI helps most, chosen from where your hours really go.

03
Foundations
One main platform, clear rules for data, and tidy files and standards.

04
People
Training for everyone, one owner, and a champion in each team.

05
Measure
A baseline, a few numbers to track, and a review every quarter.

Choosing tools is the last decision in an AI strategy, not the first.

Tool-first

- ☐ Starts from a demo or a newsletter
- ☐ Each person picks their own tools and accounts
- ☐ Nobody is trained properly on any of them
- ☐ Data ends up in places nobody checked
- ☐ Success is “we have AI”

Strategy-first

- ☐ Starts from the tasks that cost the most hours
- ☐ One shared platform and a short list of approved tools
- ☐ Everyone trained on the same tools and habits
- ☐ Clear rules on what data can go where
- ☐ Success is hours saved, measured

HOW MANY TOOLS YOU ACTUALLY NEED

Three layers, usually three or four tools

Most construction companies get most of the value from a small stack that everyone knows well. Add a specialised tool only when it solves a problem you have measured.

LAYER 1	**One AI assistant for everyone** On a business plan, so your data is excluded from training. Used for documents, emails, tenders, translation and analysis.	Everyone e.g. Claude, Copilot, ChatGPT, Gemini
LAYER 2	**AI that automates your own software** Scripts and small tools for Rhino, Revit, Grasshopper or Excel, built with an AI coding assistant and owned by you.	BIM or tech lead e.g. Claude Code, RhinoMCP
LAYER 3	**One or two specialised tools** Only for a measured problem, after a 30-day test on a real project, with a named owner.	The team that needs it e.g. feasibility, takeoff

FIVE SIGNS YOU HAVE A TOOL PROBLEM, NOT A STRATEGY

01	Several people pay for different AI tools that do the same thing	☐ Yes	☐ No
02	Staff use personal AI accounts for client work	☐ Yes	☐ No
03	Nobody can list all the AI tools in use and what they cost	☐ Yes	☐ No
04	No one has measured how many hours any tool saves	☐ Yes	☐ No
05	Tools were bought before anyone mapped the work they should change	☐ Yes	☐ No

Two or more “yes” answers: pause new subscriptions and follow the six steps on the next page.

Why fewer tools save more time

- ☐ Everyone learns the same habits, so tips and prompts spread through the office
- ☐ One data agreement to check instead of fourteen

Where the real gains come from

- ☐ Repetitive work in your own software, not chat
- ☐ Tools that follow your own standards and products

HOW TO BUILD YOUR STRATEGY

Six steps, about six weeks

A small or mid-sized company can go from scattered tools to a working strategy in about six weeks, without stopping project work.

01

Start from the business, not from AI

Write down two or three results you want this year: fewer hours on documentation, faster tenders, fewer errors in production.

TIP One sentence per goal, with a number.

02

Map where the hours go

Ask each team which repetitive tasks take the most time each month. Two weeks of simple time notes is enough.

TIP This is the core of a workflow audit.

03

Choose two or three use cases

Score each task by hours, value and effort. Start with the ones that are big, easy and use data you already have.

TIP Write down what you will not do yet.

04

Set the foundations

Choose one main assistant, close personal accounts for work, and agree a one-page AI policy on data, checking and ownership.

TIP See our guide on AI risks for a policy template.

05

Train, pilot and measure

Train everyone on the chosen tools with their own tasks. Run each use case on real projects for 4–6 weeks and compare with the baseline.

TIP Measure hours, not opinions.

06

Review every quarter

Keep what saves time, stop what does not, and pick the next use case. New tools enter only through the same test.

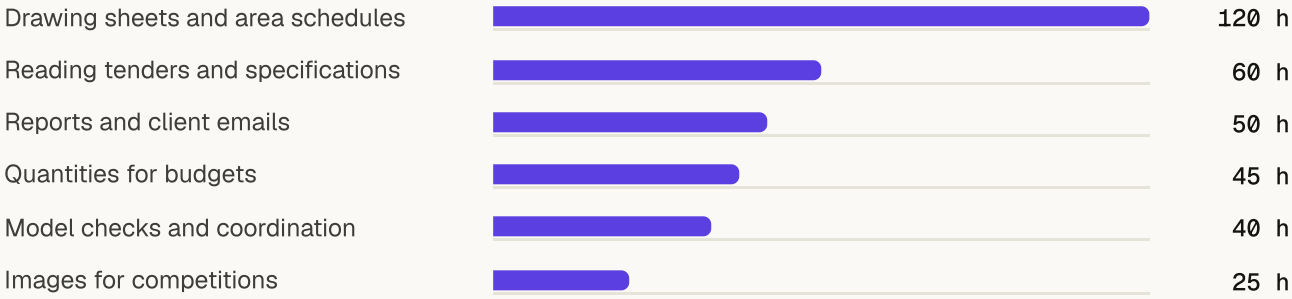

TIP One hour, four times a year.

EXAMPLE STRATEGY FICTIONAL EXAMPLE

Estudio Ejemplo: 25 people, 14 AI tools, no plan

A housing architecture office in Andalusia that also designs small timber buildings. It works in Rhino and Revit, and its AI tools are the ones on page 2. Over two weeks the team noted where their hours went.

REPETITIVE WORK · HOURS PER MONTH, WHOLE OFFICE

340 hours a month in total: about two full-time people.

CHOOSING THE USE CASES · VALUE AND EFFORT FROM 1 (LOW) TO 5 (HIGH)

TASK	H/MONTH	VALUE	EFFORT	DATA READY	DECISION
Automate drawing sheets and area schedules	120	5	3	Yes	NOW
Summarise tenders and specifications	60	4	1	Yes	NOW
Draft reports and emails	50	3	1	Yes	NOW
Quantity reports from the model	45	4	3	Partly	Q3
AI images for competitions	25	2	1	Yes	LATER
Automatic code compliance checks	–	5	5	No	NOT NOW

ESTUDIO EJEMPLO · AI STRATEGY 2027 FICTIONAL EXAMPLE

The strategy on one page

WHY	**Spend less time on repetitive documentation and more on design, with one safe set of AI tools that everyone knows how to use.**
GOALS · 12 MONTHS	1. **Cut documentation time by 60%:** from 120 to 48 hours a month 2. **Halve tender reading time:** from 6 to 3 hours per tender 3. **80% of staff** use the company assistant every week (now about 30%) 4. **No client data** in personal AI accounts
USE CASES	1. **Now:** automated drawing sheets and area schedules (Rhino and Revit scripts) 2. **Now:** tender and specification summaries with a shared prompt library 3. **Now:** report and email drafts in the office's tone and templates 4. **Q3:** quantity reports straight from the model
TOOLS	**One company assistant** on a business plan for all 25 people, **one AI coding assistant** for the BIM lead and one colleague, and **custom Rhino and Revit tools** owned by the office. One specialised tool may be added after a test.
RULES	A one-page AI policy: what data may go where, every output is checked by a person, and no new tool without a named problem, an owner and a 30-day test.
PEOPLE	A partner owns the strategy, the BIM lead builds and maintains the tools, one champion per team, and a half-day training for everyone.
NOT THIS YEAR	Automatic code compliance checks, AI image subscriptions for everyone, and any tool that only one person would use.
REVIEW	One hour every quarter: compare the numbers with the baseline, keep, stop or add.

FROM 14 TOOLS TO 3 OR 4 FICTIONAL EXAMPLE

Fewer tools, used by everyone

Eleven subscriptions are cancelled. The monthly cost stays about the same, but now every person has a safe assistant, and the biggest task is automated with tools the office owns.

CORE STACK	PEOPLE	PER MONTH	OWNER
Company AI assistant, business plan	25	€700	Everyone
AI coding assistant	2	€200	BIM lead
Custom Rhino and Revit tools	25	One-off build	BIM lead
Feasibility tool, only if the Q3 test passes	1	€180	Design lead
Total, at most		**€1,080**	Before: €1,095

DATA RULES

GREEN · ANY APPROVED TOOL
Public information, your own drafts, general questions, standards

AMBER · COMPANY ASSISTANT ONLY
Client drawings, project documents, tenders, budgets

RED · NOT WITHOUT APPROVAL
Personal data, contracts under NDA, passwords, HR files

ROLES

Strategy owner	A partner. Owns goals, budget and the quarterly review.
BIM / tech lead	Builds, documents and maintains the custom tools.
Champions	One per team. Helps colleagues and collects new ideas.
Everyone	Follows the policy, checks every output, notes time saved.

How a new tool gets in

One short form: the problem and its hours per month, the owner, a 30-day test on a real project and the scorecard from our tools guide. If it doesn't beat the current way, it doesn't get a subscription.

TWELVE MONTHS FICTIONAL EXAMPLE

A roadmap you can check every quarter

Q1 · MONTHS 1-3

Foundations

- ☐ Choose the company assistant
- ☐ Close personal accounts for work
- ☐ Agree the AI policy
- ☐ Half-day training for all
- ☐ Measure the baseline

Q2 · MONTHS 4-6

First wins

- ☐ Tender summaries and prompt library
- ☐ Report and email templates
- ☐ Build the area schedule tool
- ☐ First review

Q3 · MONTHS 7-9

Scale

- ☐ Drawing sheet tools on all projects
- ☐ Quantity reports from the model
- ☐ 30-day test of a feasibility tool

Q4 · MONTHS 10-12

Review

- ☐ Compare every KPI with the baseline
- ☐ Cancel what is not used
- ☐ Plan year two

WHAT GETS MEASURED

INDICATOR	BASELINE	TARGET	HOW
Documentation hours per month	120 h	**48 h**	Timesheets
Hours to read one tender	6 h	**3 h**	Log of 5 tenders
Staff using the assistant weekly	30%	**80%**	Admin dashboard
Paid AI tools	13	**3–4**	Finance
Client data in personal accounts	Unknown	**0**	Policy and spot checks

```
Time saved = (120 − 48) h + 4 tenders × 3 h = 84 h a month
84 h × 12 × €40/h = €40,320 a year
```

≈ ½ person

1,008 hours a year back for design work, at a similar subscription cost to before.

Read these numbers as an example

The office, tools, hours and €40 hourly cost are fictional. Your own figures come from step 2: mapping where your hours go.

TEMPLATE · PRINT AND FILL IN

Your AI strategy on one page

Fill it in with your management team in one meeting. If a line stays empty, that is your first task.

Why	What should AI change for us, in one sentence?
Goals · 12 months	2–3 results, each with a number
Where the hours go	Top 3 repetitive tasks and hours per month
Use cases now	2–3 tasks we start with
Core tools	Layer 1, layer 2, and at most two specialised tools
Rules	Green, amber and red data; who checks outputs
People	Owner, tech lead, champions, training date
Not this year	What we deliberately leave out
Measure	Indicators, baseline and target
Review dates	Four dates in the calendar

NEXT STEP

Want help building your AI strategy?

I'm Lavinia Lorena Jilavu, a BIM expert in Málaga. I helped bring AI into daily work at a modular timber company and built around 30 tools with it. I can help you:

- ☐ **Map where your hours go** and choose your first use cases, in a workflow audit.
- ☐ **Write your one-page strategy** with your management team, including the AI policy.
- ☐ **Build the custom tools** for your own software, tested on your files and yours to keep.
- ☐ **Train your team** on the tools you chose, in Spanish, English or Italian.
